

HR Attrition Dashboard: Business Analysis Requirements

II. Page 1: The Executive Overview

Core Objective: Provide a high-level, scannable snapshot of organizational health and top-level turnover metrics.

Key Business Questions Answered:

- What is the total organizational headcount and the current active workforce?
- Exactly how many employees have left, and what is the overall Attrition Rate (%)?
- What is the baseline average for monthly salary and company tenure across the entire organization?
- Where are the highest concentrations of attrition occurring structurally (drilling down from Department to specific Job Roles)?
- Does the frequency of business travel correlate directly with turnover?

III. Page 2: Culture & Demographics

Core Objective: Cross-reference the personal profiles of the workforce with their self-reported survey scores to understand who is leaving and how they feel about the workplace.

Key Business Questions Answered:

- **Demographic Flight:** Does attrition heavily skew toward younger employees (Age Bands) or specific genders?
- **The Commute Factor:** Does a longer distance traveled from home (Commute Band), especially when paired with lower pay, trigger employee exits?
- **Work/Life Balance:** Is there a mathematical link between low Work/Life Balance scores, Marital Status, and the decision to quit?
- **Overall Satisfaction:** Which specific departments are reporting the lowest Environment and Job Satisfaction scores, and is that driving their turnover?

IV. Page 3: Career Progression & Compensation

Core Objective: Identify the structural and financial triggers for turnover to determine if employees are leaving over money or career stagnation.

Key Business Questions Answered:

- **The Stagnation Risk:** What is the exact turnover rate for employees who have been stuck in the same role for 5+ years (Time in Role Band)?
- **The Promotion Gap:** Are top-performing employees (Performance Rating 4) leaving because they have not received a promotion recently?
- **Managerial Influence:** Does the number of years spent with a current manager increase employee loyalty, or does it drive them away?

- **Financial Retention:** Does receiving an "Outstanding" (20%+) salary hike successfully prevent attrition compared to a "Standard" hike?
- **Equity Impact:** Why do employees granted the highest tier of stock options (Level 3) experience a sudden, sharp spike in attrition?

V. Page 4: Employee Detail (Hidden Drill-Through)

Core Objective: Provide a granular, row-level lookup tool for managers to identify specific individuals flagged by the dashboard's macro trends.

Key Business Questions Answered:

- Who exactly are the individuals sitting inside a high-risk cohort (e.g., "Sales Executives with 5+ Years in Role")?
- What are the specific Employee IDs, Monthly Incomes, and Performance Ratings of the employees flagged as flight risks?
